

# The Big Bang Theory

SINGULARITY

The whole universe was in a hot dense state.

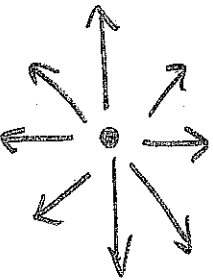

The universe begins as the size of a single atom called a singularity.

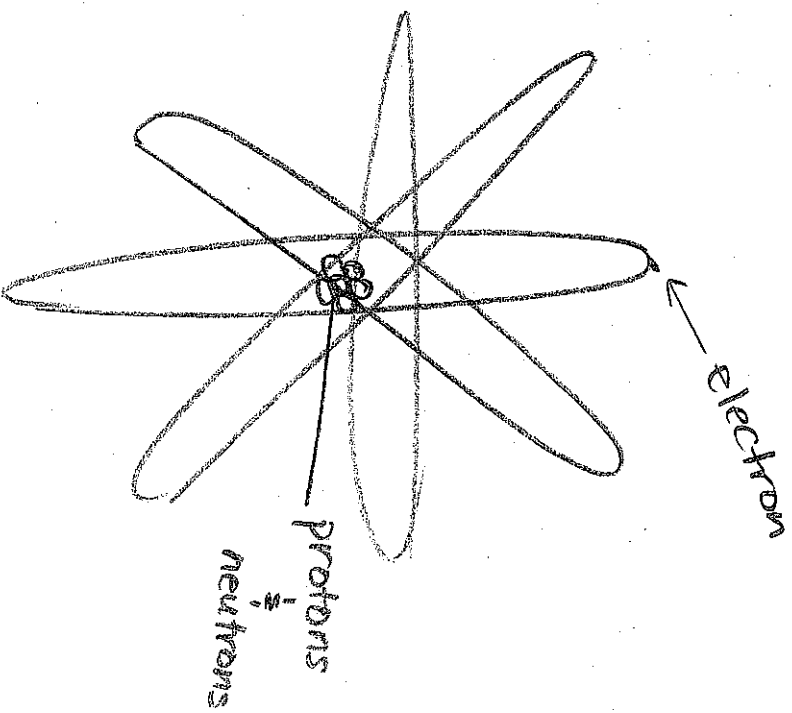

BIG BANG

The nearly 14 Billion years ago expansion started

The universe goes through a super fast expansion. All matter and space were created from a single point of PURE ENERGY in an INSTANT.

3 min after Big Bang

Energy forms matter in clumps that we call protons, neutrons and electrons.
